**Soal***Case***Birthday Cinema**

Jojo, Lili, and Bibi wants to treat their N friends. They want to treat their N friends to watch a movie. Each movie ticket cost 1 point. Luckily there is a promo, if you buy 2 tickets you get 1 for free.

How many points do they need to spend to buy tickets for all of them.

**Format Input**

The input consists of one line containing an integer N the number of friends.

**Format Output**

Output the number of points they need to spend.

**Constraints**

$$0 \leq N \leq 1000$$

| <b>Sample Input</b> | <b>Sample Output</b> |
|---------------------|----------------------|
| 0                   | 2                    |
| 1                   | 3                    |
