

2D Array

Bibi is new to Computer Science. She just learned that array can be modeled to 2D or 2 Dimensional array. She is excited to make a program that read in which index the value will be inserted.

Format Input

Input will consists of integer N, M, Q, with N being the height and M being the width. The next Q lines consist integers X,Y,A which indicates array X,Y consist of value A (At the beginning all N*M array consist value 0).

Format Output

Print the array.

Constraints

$0 < N, M, Q < 101$
