

Different Or Not Books

Lili had discovered two ancient books. She believes that both books are exact copy of each other because they have the same number of pages. She considers a book to be an exact copy if both books have the same information in the same page number for all pages. She has labeled each books' informations into integers. Now she wants you to check if she was right.

Format Input

The first line of the input is an integer N , the number of pages in each book.

The second line consists of N integers X_i separated by single spaces, the i -th X_i is the information stored in the i -th page of the first book.

The third line consists of N integers Y_i separated by single spaces, the i -th Y_i is the information stored in the i -th page of the second book.

Format Output

Print "exact copy" (without quotes) if both books are exact copies according to Lili's rule, otherwise print "not exact copy" (without quotes) in a single line.

Constraints

$0 \leq N \leq 1000$

$0 \leq X_i \leq 1000$

$0 \leq Y_i \leq 1000$

Sample Input 1	Sample Output 1
5 1 3 4 2 5 1 3 4 2 5	exact copy

Sample Input 2	Sample Output 2
3 9 30 22 22 30 9	not exact copy

Sample Input 3	Sample Output 3
8 13 42 69 33 72 81 20 25 13 42 96 33 72 81 20 25	not exact copy

Notes

In sample input 1, both books have the same information (integer X_i and Y_i) on all pages, so the answer is "exact copy".

In sample input 2, they have different information on pages 1 and 3, so the answer is "not exact copy".
