

Assignment Case	
COMP6047 Algorithm and Programming	
Computer Science	<Case Code>
<i>Valid on Compact Semester Year 2018/2019</i>	Revision 00

Soal*Case***Day Picker**

Lili wants to know N days after or before the Dth. Let's say if there is only 30 days in a month. Help her to make that program.

Format Input

The input begins with an integer T, indicating the number of test cases.

Each of test case will contains 2 integer D, N, and a character C describing day in number, how many days, and a character that will be 'n' or 'p' which means next or previous.

Format Output

Every test case output print "Case #T: R" where T is the number of test case and single integer R describing day in number after or before N.

Constraints $1 \leq T \leq 1,000$ $1 \leq D, R \leq 30$ $0 \leq N \leq 2,147,483,647$

Sample Input	Sample Output
3 12 5 n 24 7 n 7 12 p	Case #1: 17 Case #2: 1 Case #3: 25

Explanation

In test case 3, D is 7, N is 12, and C is 'p'. It means we want to see 12 days before 7th. Because it's only 30 days, we'll get 25th.
