

Average Score

Jojo has N students and each students has their own exam scores.

Jojo wants to know how many students passed the exam if the passing score is greater than or equal to their average.

Format Input

The input will consists of multiple test cases.

The first line of the input contains an integer T the number of test cases.

For every test case the first line contains an integer N.

Next line will contains N integer numbers of students score.

Format Output

For every test cases output "Case #X: Y" where X is the test case number and Y is how many students passed the exam.

Constraints

$1 \leq T \leq 100$

$1 \leq N \leq 100$

$0 \leq \text{Score} \leq 100$

Sample Input 1	Sample Output 1
1 5 60 70 100 80 90	Case #1: 3

Sample Input 2	Sample Output 2
2 5 0 0 0 0 0 5 100 100 100 100 100	Case #1: 5 Case #2: 5

Sample Input 3	Sample Output 3
1 1 1	Case #1: 1

Note

For Sample test case 1 the average from the 5 students are $(60+70+100+80+90) / 5 = 80$.

There are 3 students that have score higher than or equal to 80.
