

Treasures

Jojo is the gamemaster of Harvest Sun Online. He wants to make an event called treasure hunt. There are M players that will participate in the event. He will distribute N treasures in various areas. Each treasure in each area can only be taken once. The first player who reaches that area first will take the treasure away. Jojo wants to know how many player didn't get any treasure.

Format Input

The input starts with an integer T , the number of test cases.

Each test case starts with 2 integers N and M , describing the number of treasures and the number of players.

The next line will contain M integers, the i -th number P_i will describe the area that the i -th player went.

Format Output

For each test case output in one line "Case #T: " followed by the number of players that didn't get any treasure.

Constraints

$1 \leq T \leq 10$

$1 \leq N, M \leq 100000$

$1 \leq P_i \leq N$

Sample Input 1	Sample Output 1
3 5 3 1 2 3 4 4 1 1 1 1 2 3 1 2 1	Case #1: 0 Case #2: 3 Case #3: 1

Sample Input 2	Sample Output 2
3 1 1 1 2 1 1 4 5 1 1 2 2 2	Case #1: 0 Case #2: 0 Case #3: 3
